Comments: I love living in California. I feel blessed to live in a state with such natural beauty. In order to preserve this beauty, we need to find ways to provide cleaner energy sources. Solar energy and hydropower are not going to provide enough energy to power our state. To avoid blackouts and meet energy needs, we need to find the most realistic solutions to our energy crisis. The LNG facility proposed by BHP will provide affordable, clean energy for Californians as we continue to explore other energy sources. That is why I support the Cabrillo Port project.

Comments: I am in great favor of Cabrillo Port. I've reviewed the EIS and cannot seem to find problem with the project that hasn't been address and taken care of. I am impressed with the agencies who prepared the document and BHP Billiton for being willing to comply and with the best possible measures. Natrual gas is a necessity in California and we should support projects that can provide more in the best possible manner. Thank you for allowing comments on this project. Sincerely, Ester Higgins

Comments: Cabrillo Port is located so far offshore that not only will it not be visible, you won't hear anything from it. As well, agencies that compiled the EIS/EIR put in extra measures to protect communities from construction and operations, including reducing the amount of trips boats will be allow make out to the project site. I feel this is a well thoughtout plan that is respectful of the communites that will be impacted.

Comments: I am for the Cabrillo Port Project. I had questions about the looks of the port from shore, but after reading the revised EIS/EIR I found that my questions have been answered. Even with great weather the port is hardly visible.

Comments: As California's population continues to grow, our need for additional sources of energy increases. As space is so limited in our "Golden State," the Cabrillo Natural Gas Port makes sense. It is far enough offshore not to affect most water sports and not be visible from shore. I applaud Southern California Edison for engineering a solution to bring natural gas into our state without a visually obtrusive facility.

Comments: While I truly believe the long-term solution for California and the U.S. is to more aggressively develop alternative energy sources, I'm practical enough to realize that we have to also augment our production of traditional energy sources in the present day. With that in mind, and cognizant of the fact that LNG is a cleaner fuel than coal or oil, I can't help but support the Cabrillo Port facility. I only hope that someday it can be converted to a wind farm or something.

Comments: In the interest of secure and reliable sources of energy for California, I am in support of this project. I believe that as planned, it will be a safe project, provided the thorough measures are taken as described in the Draft EIS/EIR. Furthermore, a project of this nature will support the local economy through jobs and stable energy costs, while still protecting the natural environment of the coast of Ventura County. I am resident of Camarillo, California and a licensed civil and structural engineer. I hope to provide more extensive comments either in writing or at a public meeting prior to the December 20, 2004 deadline.

Comments: One of the things I love about our state is the California coastline. Going to the beach and seeing nothing but the blue sea is what draws millions here. I understand the Cabrillo Port project is miles out to sea where its visibility is minimal to none. Combined with the fact that it is a structure that can be removed, I approve of this project.

Comments: I cant imagine anyone complaining that the Cabrillo Port Project is not the most effective way to clean up the air in California or other places in the U.S. I am one person who is glad to see BHP comming up with a REAL Soultion.

Comments: I'm close to the deadline here, but I wanted to write a quick comment of support for this project. I have looked over the EIS and am please with all I saw. I'm in hopes this project will be completed and aide us in our energy shortage. Thanks for allowing comment.
